Key benefits

Suitable for your steam humidifier

OptiSorp is tuned to get the best performance with Condair CP3, Condair GS and Defensor Mk5 humidifiers. This reduces installation times and enhances the performance of your systems.

Minimum humidifying distances

Humidifying distances are up to four times shorter than those of conventional steam distribution systems, thanks to steam distribution with precision nozzles. This means that the humidifying system can also be utilised where space is at a premium.

Free of droplets steam distribution

It really should come as no surprise: OptiSorp distributes steam uniformly and free of droplets over the entire air duct cross section.

Operation without wear

Good news for your budget: most important OptiSorp components – steam distribution pipe and precision nozzles – are made of stainless steel. They are practically indestructible and enable system operation with long maintenance intervals.

Ready for operation in no time

OptiSorp is manufactured to your individual specifications and thus compatible with the duct dimensions of your system. Delivery as a turnkey unit reduces installation time to a minimum.
